

## Authentication API Documentation

### Overview

This documentation provides users with clear instructions on how to retrieve employee information using their Civil ID, including detailed guidance for effectively interacting with the API. All API endpoints require authentication via a bearer token.

When making requests, replace {parameter} placeholders with actual values. Ensure that the Bearer token is included in the Authorization header of all requests:

---

### 1. Generate Token

This endpoint generates an access token for user authentication. The token must be included in subsequent API calls as a Bearer token.

**Method: POST**

**URL: <https://authenticator.media.gov.kw/api/getToken>**

**Content Type: application/json**

#### Request Body

```
{
  "username": "xxxxxx",
  "password": "*****",
  "civilid": "282082102788"
}
```

#### Response

Success (200 OK)

```
{
  "success": true,
  "statusCode": 200,
  "message": "Token generated successfully.",
  "accessToken": "your_access_token_here",
  "requestID": "MOINFO-AUTH-01012024-1",
  "civilid": "123456789"
}
```

### Failure (400 - Authentication Error)

```
{
  "success": false,
  "statusCode": 400,
  "message": "The Civil ID provided is invalid. Please verify and try again.",
  "accessToken": null,
  "requestID": null
}
```

### Error Status Codes

| Status Code | Message                                                                                                                         |
|-------------|---------------------------------------------------------------------------------------------------------------------------------|
| 401         | Invalid credentials. Please check your username and password.                                                                   |
| 400         | The Civil ID provided is invalid. Please verify and try again/ Invalid input parameters. Please check your input and try again. |
| 500         | An error occurred while creating the request. Please try again later.                                                           |

## 2. Retrieve User Details

This endpoint retrieves user details based on the civilID and requestID obtained from the authentication step. To use this method, you need to make a POST request over HTTPS. When making the API call, include the generated token in the authorization option as a Bearer Token.

**Method:** POST

**URL:** <https://authenticator.media.gov.kw/api/EmpAuth>

**Content Type:** application/json

Request Body

```
{
  "civilid": "282082102788",
  "requestID": "MOINFO-KNMID-XXXXX-XXXXX"
}
```

## Response

### Success (200 OK - Authenticated User)

```
{
  "success": true,
  "statusCode": 200,
  "message": "Successfully retrieved card details.",
  "data": {
    "nameAr": "XXXXXXXX SSS",
    "nameEn": "XXXXXXXX SSS",
    "civilId": "*****",
    "nationalityAr": "هندي",
    "nationalityEn": "IND",
    "gender": "Male",
    "dob": "1978-01-26"
  }
}
```

### Failure (403)

```
{
  "success": false,
  "statusCode": 403,
  "message": "You do not have access to enter. Please visit Business Center - Information Systems to add your account",
  "data": null
}
```

## Error Status Codes

| Status | Message                                                                          |
|--------|----------------------------------------------------------------------------------|
| 400    | Civil ID and Request ID are required. Please provide valid values and try again. |

|     |                                                                                                                                    |
|-----|------------------------------------------------------------------------------------------------------------------------------------|
| 401 | The Civil ID and Request ID combination is not authorized. Please verify the information and try again.                            |
| 403 | Your account does not currently have access. Please visit the Business Center - Information Systems to request access permissions. |
| 404 | User information is missing or invalid. Please contact support for assistance.                                                     |
| 500 | Failed to retrieve card details.                                                                                                   |

### **Security Considerations**

- Always use HTTPS for API communication.
- Store authentication tokens securely. -
- Ensure that authentication is completed within 5 minutes.
